

The way you store and handle valuable inventory in your parts department can *cost* you money or *make* you money.

SOLUTIONS FOR AUTOMOBILE DEALERS

 **Cisco-Eagle Inc**TM

www.cisco-eagle.com/automotive

Organizing everything is a challenge.
Preventing inventory shrinkage is a challenge.
Making your parts department run the best it
can is a challenge.

To determine your parts operation profit potential, answer the following questions:

- Do you turn away customers because a part or accessory is not in stock or cannot be located?
- Do your technicians spend too much time waiting at the counter for needed parts instead of finishing a repair?
- Do you have enough space for the inventory you need to carry?
- Is your space for sheet metal and body parts inventory sufficient for your needs?
- Does your Customer Service Index meet or exceed industry standard?
- Do Parts personnel spend more time hunting for parts than is necessary?
- When you need to move or reconfigure inventory, are you easily able to do so?
- Are new model introduction parts easily absorbed into your Parts Department?
- Does your Parts Department produce satisfactory payback or ROI (return-on-investment)?

Storing parts correctly can make you money. Storing them incorrectly costs you money every day.

Your Parts Department should operate as a profit center. If it doesn't, Cisco-Eagle can help you transform it into a profitable operation that adds value for you and your customers.

Design and attention to detail are key in creating functional parts departments. The key is using the right storage solution to fit the way you work. For dealers who must store thousands of valuable small parts in a confined space, keeping everything organized, secure and safe is vital.

If you cannot answer "yes" to all of the questions above, it's time to consider modernization. Even if your Parts Department is operating satisfactorily right now, you may want to improve its efficiency and profitability. In either case, contact Cisco-Eagle today. Our specialists assist dealerships in the construction of new facilities and the modernization of current ones.

If you had more space for additional parts inventory, would you carry it?

We help dealers maximize their storage space by utilizing the cube to its fullest.

We recognize the unique storage and handling challenges automobile dealers, parts stores, and parts distributors face. From bulky bins for small components to bulk storage racks for tailpipes and bumpers, we're your best material handling source.
