Cisco-Eagle wins MHIA Material Handling Content Award for Excellence

Body:

DALLAS, TX – September 1, 2005 – Cisco-Eagle, Inc.:

The Material Handling Industry of America recently released the list of winners for its 2005 annual content awards, and Cisco-Eagle's Conveyor Resources area was awarded second place in the competition.

A panel of academic judges and industry experts judged the entries. The national competition is sponsored by the College-Industry Council on Material Handling Education, the educational arm of the Material Handling Industry Association, a trade association for the material handling industry.

The groups created the awards to recognize excellent material handling-related content published in the last two years. According to Mike Ogle, CICMHE Managing Director, "the group developed these awards to recognize companies that were clearly developing valuable educational content for the industry." Over 40 entries were received.

The group focused on the use of material handling in manufacturing, distribution, warehousing, and logistics, ranging from the application of individual technologies to the improvement of entire operations.

Submissions were judged on the basis of their educational value to the practice of material handling, clarity of presentation and contribution to the advancement of the material handling industry. The awards encompassed articles, white papers, website content, and online software applications.

Cisco-Eagle's entry was a series of conveyor related articles and features that provide "how-to" information. The conveyor resources page includes new, up-to-date information on conveyors and how to specify, operate, and maintain them safely and effectively.

Much of the content is original, and some is republished with permission from other sites if it fits the needs of customers. The site includes several hundred pages of conveyor content, including the articles index.

About Cisco-Eagle

Markets, Products, and Services

Cisco-Eagle provides solutions for movement, storage, retrieval, control and protection of materials and products throughout manufacturing, distribution, consumption and disposal. Solutions involve application of material handling equipment such as conveyors, carousels, rack, shelving, mezzanines, and other important elements. More complex solutions may incorporate a higher level of controls, automation equipment and distributed intelligence.

History and Locations

Cisco-Eagle is headquartered in Dallas, Texas with regional offices throughout the Southwest. Additionally, numerous satellite offices are found throughout operational regions to meet the growing expectations of our customers.

Employee Ownership

As an ESOP company, Cisco-Eagle is owned by its Employees. Its business philosophy is founded on customer-focused total quality management, continuous improvement, and open book management. The company believes that owners perform better than

employees, delivering a significant customer satisfaction advantage. Almost all Cisco-Eagle employees own stock in the company.
