

LifePoint™ STOP System

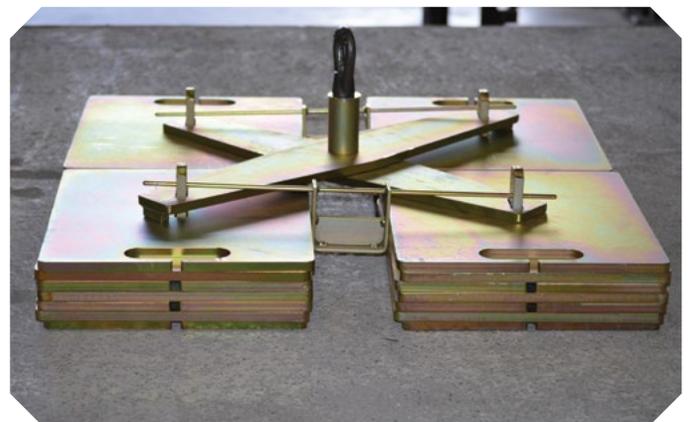

The new LifePoint **Single Tie Off Point (STOP)** is the perfect solution for fall protection when circumstances require non-penetrating versatility. LifePoint provides the answer with an easy to set up and quick-move solution.

Non Penetrating Versatility: The LifePoint STOP System is a free standing counter weight design that can be placed on flat surfaces with a maximum incline of 5%. Tested and approved for multiple surfaces such as single ply membrane, BUR, concrete, TPO and EDPM. LifePoint meets fall-arrest ratings for one person weighing up to 310 lbs (including equipment).

Modular Design: The LifePoint STOP System's modular design makes installation easy. The base is set in place and the individual counterweights are stacked into position. No component of LifePoint weighs more than 32 lbs so it can be installed by most employees. The center anchor provides safe, simple and rugged use.

Mobility: LifePoint can be repositioned in a few minutes by one person. With the patented transport cart, LifePoint can be moved to a new location quickly and safely by a single person.

Built to Last: Whether you transport LifePoint from job to job or use it as a permanent tie off on your rooftop, the STOP System is built to last. With plated corrosion resistant components, LifePoint will perform for years.

LifePoint™ STOP System

MOBILITY IS AS EASY AS 1-2-3

1. Position Cart

2. Raise LifePoint

3. Move to New Location
