

# Lista Keyless Keypad Lock

## Controlled keyless access makes Lista drawer cabinets and mobile cabinets more secure

The limitations of physical keys and key groupings are a thing of the past thanks to Lista's new keypad lock.

With the keypad lock, users can create "keyed-alike" groupings and master lock groupings by setting up same-user-codes for Lista drawer storage cabinets and mobile drawer cabinets. And access codes can be quickly and easily reprogrammed as storage and security needs change.

The new keypad lock also means there are no keys to retrieve from exiting personnel, and no keys to lose, replace or take. This means greater security and reduced shrinkage.

Our keypad can be programmed with up to five different user codes at a time, which can be changed as often as needed. The attractive keypad fits snugly against the cabinet housing for a clean, attractive profile.

The keypad lock can be ordered for any new Lista drawer storage cabinet or mobile drawer cabinet, or can be retrofit to any Lista drawer cabinet or mobile drawer cabinet sold in the past ten years.

## INTRODUCTORY PRICING EXTENDED!

We are offering a promotional price of **\$99.00** for the keyless keypad lock from June 1 - Dec. 31, 2006. This special price applies both to customers buying the keypad lock for new cabinets and for retrofitting existing cabinets.

## Features

- *Lista drawer cabinets and mobile drawer cabinets can be easily programmed to share user access codes to create virtual “keyed-alike” groupings and master lock groupings. As storage needs evolve, the user codes can be easily and quickly reprogrammed to create new groups and master groups.*
- **Easy retrofit** to existing Lista drawer cabinets and mobile drawer cabinets sold in the past ten years, regardless of the cabinet’s height, depth, width or drawer configuration.
  - Replaces existing cylinder lock.
  - Some limitations apply to NW and MP width mobile cabinets – contact Lista for more information.
- LEDs let user know if correct code has been entered.
- Lock knob is turned 90° clockwise to unlock the cabinet, and 90° counter-clockwise to relock. 
- Secure code entry ensures **only authorized personnel can change codes:**
  - Keypad lock comes with pre-set factory code which customer re-programs with unique master code.
  - Master code is required in order to add, modify or delete any user codes.
  - **Five different user codes possible at any time.**
- Five-digit codes are easily reprogrammed, with **thousands of possible user codes.**
- Battery operated with four AA batteries. LED light comes on when battery power is low. The batteries are rated for approximately 8,000 lock cycles.
- **Battery override available if batteries fail.**
- Easily cleaned with damp cloth.

### Keyless keypad locks

Lock kit comes complete with four AA batteries.

PART NO.	DESCRIPTION	LIST PRICE	INTRODUCTORY PRICE*
KPLOCK/HSG	keypad lock for cabinet	\$116.03**	\$99.00**

## Programming the keyless keypad lock is as easy as A-B-C!

### A. Program the Master Code

- press programming button for several seconds
- enter initial factory code
- press programming button for several seconds
- enter your new 5-digit master code

### B. Program the User Code(s)

- press programming button for several seconds
- enter master code (see above)
- enter a user number (1, 2, 3, 4, or 5)
- enter a 5-digit code for the user code
- repeat sequence for up to 4 additional user codes

### C. Unlock the Cabinet

- to open the cabinet, simply enter one of the 5-digit user codes – when lock audibly clicks, turn lock knob 90° clockwise

For detailed instructions, see user manual.
