## ***Lista Cabinets Bring New Storage Efficiency to Air, Land and Sea***

As a world leader in the design and manufacture of modular storage and workspace systems, Lista's innovative storage solutions enable Department of Defense facilities and rapid deployment containers to maximize storage space, improve organization and increase productivity. Modular storage cabinets are the perfect storage solution for military ISO containers, ISU containers, tactical shelters, trucks, trailers and other mobility applications. Lista cabinets have 50% more storage capacity than conventional shelving and feature much more usable storage space than any other competitive cabinet. Lista's customizable cabinets can reduce the number of air, land and sea containers, freeing up cargo space on aircraft, ships and trucks. Lista cabinet drawers can store a wide variety of components, including Class IX, ASL, PLL and even weapons.

Tricon container

**Lista's full-height drawer sidewalls allow the use of the full cubic capacity of the drawer.**

**Lista cabinets and mobile cabinets maximize security with options like our heavy-duty hinged lock bars with padlock (above left), hasp door and safety lock (above center) and our lock-in-lock-out safety device (below right) with its open and close release lever in front for easy access.**

**Lista's galvanized steel shelf battens (above) can be used to stabilize cabinet contents, keeping bulk materials in place during deployment or when moving over rough terrain. The shelf with lip option (right) similarly keeps cabinet contents from sliding off of shelves.**

**Lista's extremely durable fork truck base has an open-slotted foot in both the front and back position for easy bolt installation and removal.**

## *Listá Cabinets Prove Tough Enough for the Roughest Terrain*

Listá modular high-density storage cabinets have completed and passed two extensive vibration and over-the-road rough terrain tests by the U.S. Army Developmental Test Command, Support Equipment Team, WARFIGHTER at the Aberdeen Test Center, Aberdeen Proving Ground in Maryland. Placed on a vibration machine simulating rough terrain and tested at the most extreme weights ever tested, Listá cabinets proved "strong enough to withstand the dynamic vibration environment represented by a composite wheeled vehicle schedule." In other words, they proved tough enough to hold and move your deployable mobile assets under the roughest in-field conditions.

### *Listá Design Services*

Listá's sales staff, technical support and design teams can provide you with a detailed plan for your individual workspace and storage needs, free of charge.

### *GSA Contract*

Listá's GSA contract number is GS-27F-5061C. Our CAGE Code is 57617. Listá International Corp. accepts the GSA Smart Pay or Government Purchase Card (GPC) and is available on the GSA ADVANTAGE Program.
