Two Types of Posts

The Spider common post, made of 14 ga steel offers up to 7 fixing zones for different applications. Its tubular T-shape and hollow center allows components to be completely modular.

Two types of front finishes are available:

The "H" front is smooth surfaced, resulting a neat appearance.

The "R" front is perforated to add Mini-racking or mezzanine components.

SHELVING "H" POST

Side panels
Side panel braces
