

# PickerPal Products expands its offerings.

**PickerPal** Mezzanine Pallet Safety Gate uses the same concept as the pick module application. Utilizing rack frames and cross beams, PickerPal mounts 6 arms to create a safe barrier on a mezzanine for pallet storage.

As the goods are removed from the skid, the top set of arms close individually. Followed by the second set of arms and finally, when the empty skid is removed, the third set of arms close creating a kick plate.

## PickerPal? Yeah, we got that!

A large office supply retailer is testing **PickerPal** at several distribution centers, with more than 500 arms in use. The retail giant needed a better solution to protect employees and inventory, and the company appreciated that the gates could remain open with as little as a one-pound case on a pallet. Additionally, **PickerPal** was the choice for a major liquor distributor using over 600 arms.

## Better quality. Better pricing.

Protect your pick modules with a swing-arm gate that is actually designed for this purpose. **PickerPal** is not only effective, but it installs in just minutes, AND costs less than those manual gates or large mesh gates. Don't settle for a small swing gate that wasn't designed for this type of application. Trust **PickerPal**.

A Safety Barrier - IBC Compliant  
Reduce Maintenance Costs  
Increase Productivity  
Save Money

# Need a hand in your DC? We'll give you two arms.

One of the most common OSHA citations in this country is for failure to provide adequate fall prevention.

The patent pending **PickerPal Arm** and hinge assembly is uniquely designed as a protective measure for exposed pallet locations within a pick module. Keep your workers safe while picking your products—and save money over the lesser solutions!

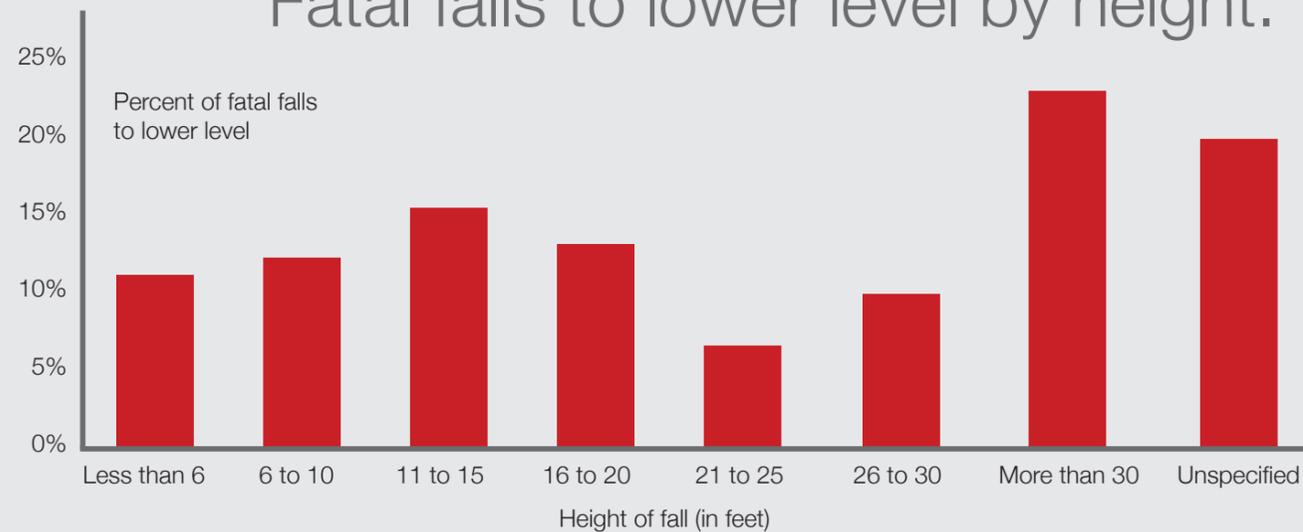

## Two arms are better than one.

Unlike some gates, **PickerPal Arm** has two, spring-loaded arms, which is preferred by OSHA.

- This means the fork truck operator can place the product into position without the assistance of order picking personal.
- The top arm automatically closes as cases are removed, so you don't have to rely on employees to manually close it.
- The bottom arm also closes as products are removed creating an additional barrier, even when the pallet is empty.
- This feature dramatically increases safety because the skid does not hold the gate open, while waiting for the fork truck driver to retrieve the empty skid.

## Fatal falls to lower level by height.

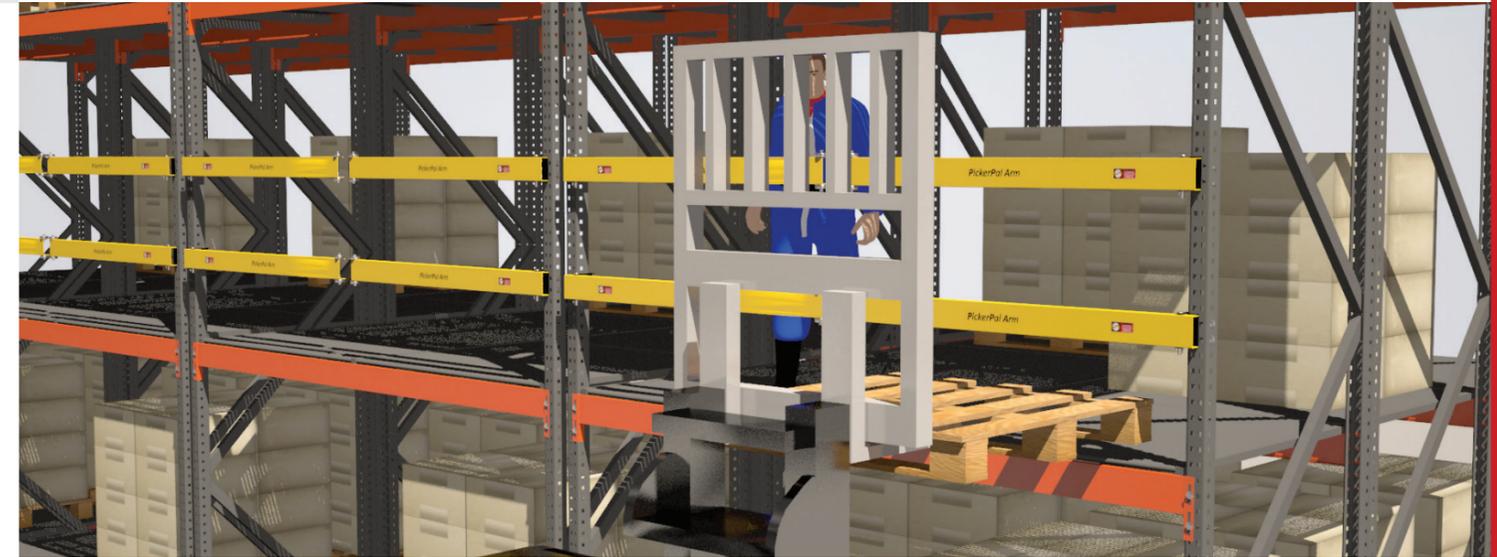

Falls to lower level accounted for 533 fatal work injuries. Of those cases where height of fall was known, 57% involved falls of 20 feet or less. SOURCE: US Department of Labor Statistics

# Productivity booster.

When the fork truck operator is ready to load or unload a pallet with a forklift, he does not need to rely on another worker to handle it. They can position the skid without the assistance of any personal. Often, the gates remain open because of the empty skid, which negates the safety gate completely, causing the safety hazard your trying to correct.

**PickerPal** presents the solution. The swing arm automatically opens and closes, so you also don't have a gate taking up valuable storage space. And empty pallets can be easily removed without the assistance of additional personnel.

**Your workers can spend their time picking more orders than managing gates.**

## The light heavyweight.

While some gates are heavy and cumbersome, **PickerPal** is light in weight, but heavy in durability. The hinge and springs are custom-made for the engineered arm, matching the length and weight of the arm, for maximum performance.

The hinge mounts to the side of the rack frame aligning to match the two inch hole pattern, standard in most rack frames. Custom hinges are also available. This is especially important as some manufacturers of rack are closing the back side of the frame for additional strength.

The powder-coated steel (in standard OSHA yellow) stands up to the rugged environment of a pick module in a distribution center. PickerPal comes ready to install, complete with warning labels applied. And every **PickerPal Arm**, spring and hinge assembly is backed by a one-year guarantee.
