

STEEL KING[®]

Brace yourself

against costly rack damage

**COLUMN
CORE**

Forklift damage is the core factor in about **90%** of rack failures. Get to the heart of the solution with Column Core[®] by Steel King.

Column Core is exclusively available as a component to Steel King's SK2000 tubular racks—the benchmark system in the storage market. Column Core's unique C-shaped column reinforcement takes a rack that's already 2½ times more impact resistant than open-back uprights and doubles it. With Column Core, your SK2000 rack is a full 5 times more impact resistant at the front corners and sides where the upright is most vulnerable.

Column Core is sold in standard heights from 6 to 96 inches, in 6-inch increments. Custom heights are available upon request. Column Core can be installed in one or both upright columns for maximum rack protection.

Actual reinforcements are not powder coated. The Column Core reinforcement shown is powder coated yellow for added emphasis and detail.

*Column Core
advantages:*

- Retain full beam adjustability
- Reduce puncturing, buckling, and torsional twisting
- Increase protection without additional installation costs
- Reinforce only as high as needed

Column Core provides:

- Extra strength against impacts
- Extra reinforcement

Brace yourself for reduced rack damage, call Steel King at (800) 826-0203 and ask for Column Core.

Steel King offers a wide variety of plant safety products

MEGA GUARD

Steel King's Mega Guard system is designed for maximum protection at key areas. Tubes are angled to deflect impacts and maximize strength. It's a completely welded one-piece design for quick assembly.

GUARD DAWG

Always on duty, Steel King's Guard Dawg system is an inexpensive low-profile method of protecting racks at intersections and along high-traffic routes.

- 5" x 3" x 3/8" angle
- Right, left, or double-ended guards
- Protects 3" or 4"-wide upright columns
- Anchors and hardware included

STEEL GUARD™

Steel Guard is a smart investment in plant safety, a safety railing system that serves as a visual and physical barrier between machinery, staging, and work areas. By providing protection for your people, product, and physical plant, it can be one of the best investments you can make for your facilities.

- Solid protection for work areas, product storage, and equipment.
- Heavy 11-gauge corrugated steel rails mounted to 1/4" wall structural steel columns absorb and deflect impacts from forklifts and other mobile equipment.
- Optional lift-out/drop-in rail system maintains accessibility while providing unbroken protection.
- Convenient modular design is ready to install without on-site cutting, welding, core drilling, or painting.

COLUMN PROTECTOR

Steel King's free-standing Column Protectors shield rack columns from collision damage by blocking and deflecting fork trucks at the point of impact.
