### For a Durable Enamel Finish

Wildeck's automated paint line delivers the improved quality and durability you demand for enhanced product appearance and performance.

A computer-controlled 7-step process electrostatically applies a uniform 2-part polyurethane coating with superior results similar to an automotive clear-coat finish.

To comply with specific facility requirements, custom paint colors can be mixed to your specifications and applied.

\* Due to variations in monitors and printers these colors are for approximation only.

Please contact your Wildeck representative to request paint chip samples.
