KEEP YOUR EMPLOYEES
SAFE

Forklift Activated Projector

Industrial safety projectors are used in industrial settings to improve safety conditions for workers. These projectors use advanced technology to project visual warning signals or images onto floors, walls, or other surfaces to alert workers to potential hazards and improve their situational awareness.

Project ALERT

Some common applications of our industrial safety projectors include:

- **Forklift Activated:** Our unique ability to activate a safety projector when a forklift or pedestrian approaches adds another level of safety.
- **Floor Marking:** Safety projectors can project brightly colored lines or shapes onto floors to help workers navigate through a facility or avoid dangerous areas.
- **Hazard Warnings:** Projectors can be used to project warning messages, icons, or symbols onto walls or floors to warn workers of potential hazards such as moving machinery or hazardous materials.
- **Emergency Egress:** Safety projectors can be used to project exit signs or arrows onto floors to help workers find their way to emergency exits during power outages or other emergencies.
- **Customization:** We offer custom images if needed and the option to incorporate flashing for even more visibility.
- **Integration:** Our projectors can integrate with other Alert Safety products to provide the ultimate solution for your area.
