

ALERT SAFETY PRODUCTS

Forklift Warning System

KEEP YOUR EMPLOYEES
SAFE

ALERT Safety Products: Office ALERT

The workplace can be dangerous, particularly with forklifts traveling and moving materials. When safety is neglected, your company may experience injuries, fines, cost increases and reduced profitability.

Does your company have the most current safety strategy in place?

Using Technology to Improve Workplace Safety: Office ALERT

Let's face it: safety is an ongoing challenge. Forward-thinking companies equate safety actions and results to return on investment*. It's no "accident" ALERT Safety's engineering expertise advances the industry in inventing and manufacturing forklift warning systems.

At ALERT Safety, we're continuously improving and innovating forklift warning technology. Office ALERT warns workers that a forklift is approaching before they exit an office door and step into an active forklift aisle. It will flash CAUTION and a directional arrow when a forklift is approaching.

- LED display will flash CAUTION with an arrow indicating the direction a forklift is approaching from.
- Sensors have an adjustable range to provide a 2 to 4 second advance warning.
- Our Forklift Warning Systems can be custom designed to meet your needs at each area.
- The Office Alert is activated only by approaching forklifts, they will not be activated by pedestrians or forklifts exiting the area.
- The Office ALERT can be used with our Mirror ALERT or other ALERT products.
- Our systems are low power, low voltage and easy to install.
- Small LED display is 6" tall, 10" wide and 1.5" deep.

Forklifts pose specific dangers that demand accident prevention:

- BLIND INTERSECTIONS
- PEDESTRIAN DOORS AND WALKWAYS
- SPEED
- LIMITED VISIBILITY
- NOISY AND BUSY WORK ENVIRONMENTS

Your employees' safety makes good business sense.
