

BALL TRANSFER TABLES

The Power of Precision and Flexibility

Discover the versatility and efficiency of Ashland Conveyor Systems' Ball Transfer Tables. Our innovative ball transfer tables are designed to provide seamless material handling solutions for your business. These tables feature strategically placed ball transfers on rigid frames or plates, enabling you to effortlessly move loads in multiple directions. Ideal for packaging and assembly stations, our ball transfer tables facilitate smooth rotation and multi-directional movement of products, optimizing your workflow. They are also essential at conveyor intersections, ensuring efficient horizontal movement in the direction of flow.

EXPERIENCE THE DIFFERENCE

Effortless Material Handling

Ball Transfer Tables enable seamless movement of products in various directions.

Versatility

Highly versatile and can be integrated at the end of your conveyor systems, packaging and assembly stations, and conveyor intersections.

Optimized Workflow

Allows products to rotate or move in multiple directions, enhancing productivity and efficiency in your operations.

Smooth Rotation

Ensure smooth rotation of products, making it easier to inspect, assemble, or package items accurately.

Horizontal Movement

Enable smooth horizontal movement in the direction of flow, reducing the risk of jams or slowdowns.

Durable Construction

Built and designed to withstand heavy-duty usage and provide long-lasting performance.

Insert Plates

Insert Plates: Plates are easily bolted into the frame to hold the ball transfer units in a specific arrangement.

Material: Made from durable 6" x 1" x 12 ga. galvanized steel.

Ball Hole Arrangement: Precisely punched with ball holes on 1" centers for flexible configuration.

Optional: Empty insert plates may be purchased to accommodate your specific needs.

Constructed with a robust 3-1/2" x 1-3/8" x 11ga. painted steel channel

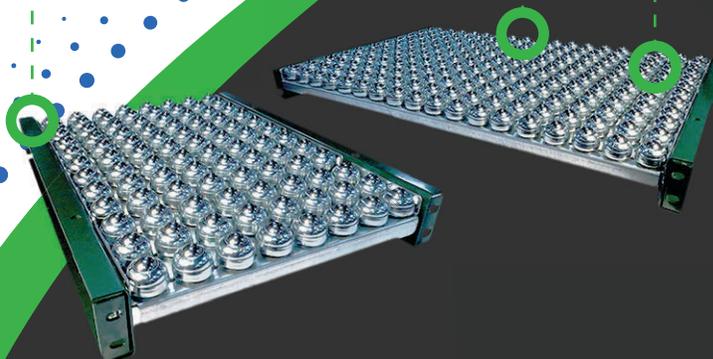

Precision Ball Assemblies

Ball Assemblies: Our ball transfer tables come standard with 1" diameter steel balls.

Durable Housing: Featuring a 1-3/4" diameter steel housing for long-lasting performance.

Flexible Arrangement: Ball transfers are arranged in the insert plates based on your application's required centers and securely bolted from below.

Expandable System: Additional ball transfer units are available for separate purchase, allowing you to expand or replace your existing setup.

WHY BUY FROM ASHLAND?

Fast Turnaround: Our footprint in North America enables our customers to source high quality products domestically, eliminating the uncertainty of today's global supply chain while reducing lead times.

Uncompromising Quality: Delivering superior-grade products for reliable performance.

Experience and Knowledge: Over 80 Years of knowledge in the Conveyor and Conveyor systems business.

Versatile Selection: Diverse array of conveyor rollers to suit every application.

Dedicated Support: Exceptional customer service ensuring your satisfaction.

TECHNICAL INFORMATION

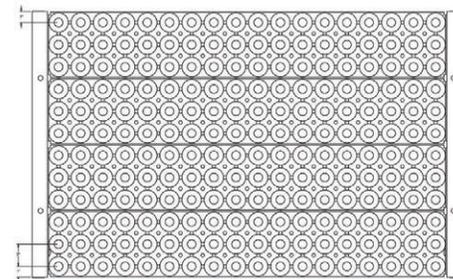

Ball Transfer Centers

Much like a skatewheel conveyor, our ball transfer tables requires at least 5 balls under your product at all times to ensure the product will move efficiently along your table. Ball transfer centers options range from 2" to 6". If your products have large flat bottoms, the ball transfers can have wider centers with less units. If your products have smaller flat bottoms, closer centers and more ball transfer units under the product is required for the items to move smoothly.

6" Centers

2" Centers

Cover Plates

Optional cover plates available. Allows balls to be exposed for free movement of product while protecting from snags.

Supports

Our ball tables do not come with the supports. Supports come in different styles and heights. It is possible to use our ball tables without supports and lay them directly on a flat, even surface. When pairing your table with supports, you will need to match the between frame dimensions (except for low profile supports).

Replacement Parts

Our ball transfer tables are constructed with insert plates and ball transfer units. Both of these items can be purchased separately and used to replace damaged units or add to existing systems.
