

# SKID LIFT™

LV & LVE SKID LIFTS

LV SERIES

Accessory tables mount on top of the forks.

Forks lower to 3.3 in. for optimal clearance under skids.

Locking foot brake is standard.

Twin heavy duty lifting chains provide a 2:1 lifting ratio for shorter lift stroke and reduced cylinder wear.

LVE SERIES

Bishamon skid lifts are rugged high-rise, fork style lifts that provide improved ergonomics and a functional ease of access for your workforce. By raising the top of the load to a convenient working height and providing easy mobility, skid lifts improve material handling productivity, increase efficiency and reduce potential worker injury - adding profit to your bottom line.

LV series skid lifts are available in eight models that include both wide and narrow fork widths and capacities to 2,200 lbs. Manual models have an integrated foot pump while a 12-volt DC power unit provides the lifting power on electric models. All models have variable raise and lower controls that allow the forks to be accurately positioned anywhere between the lower and upper travel limits. These versatile lifts have a dual functionality - not only do they lift and lower skids (open bottom, euro style pallets), the mobility feature allows the skids to be moved in and out of the work cell.

LV skid lifts are simple to operate, rugged and versatile and like all Bishamon products they are better by design. Twin heavy-duty lifting chains and a complete structural frame with captured rollers ensures superior stability and a lift that is capable of meeting today's demanding applications. Not only are they built SMART, they are built Bishamon TOUGH - for years of trouble free operation.
