UNIT LOAD FOR PALLETS & HEAVY LOADS
AUTOMATED STORAGE SYSTEMS

AUTOMATED PALLET STORAGE AND RETRIEVAL SYSTEMS
GAIN CONTROL OF YOUR OPERATIONS

shop|talk

"*Let Cisco-Eagle and Muratec help you with the right pallet storage and retrieval system for your needs—one that optimizes valuable space and saves time every hour of every day. One that reduces labor requirements, increases throughput, improves inventory visibility and integrates with your information systems, material handling operations and business structure. You'll store, control and do more.*"

— Kevin, Employee-Owner
Cisco-Eagle Houston

UNMATCHED STORAGE DENSITY

If you're squeezed for space, unit-load AS/RS systems can help. Storage footprints become more efficient. Space savings up to 85% are possible with the right system and application. Reduce aisle space, utilize the full vertical cube and reduce walking and wasted time.

SAFER OPERATIONS

When you replace forklift traffic with high-density AS/RS storage, your operation becomes safer. Reducing forklift presence reduces congestion, collisions and damage.

SAVE LABOR AND TIME

Unit load systems handle pallets in less space with fewer people. When people are involved in materials transport, that's wasted time, but unit load systems automate those lower-value tasks, which lets you use that valuable labor elsewhere, particularly in multi-shift operations.

THROUGHPUT AND EFFICIENCY

Loads stored in automated storage systems are inherently faster to load, unload and access than those stored in rack systems because they eliminate manual storage and access.

INVENTORY VISIBILITY

Rack storage is efficient, but AS/RS systems give you high levels of inventory visibility into where all your pallets are stored and the ability to access them in real time.

WHY AS/RS?

- Are you are experiencing floor space challenges?
- How much time do your people spend transporting and accessing palletized loads?
- Do you have safety concerns related to forklift traffic and pallet storage?
- Are product security, inventory visibility and tracking satisfactory in your operation?

TRUSTED PROVEN PARTNERS

Cisco-Eagle is a material handling systems integrator. We've been in business since 1970 and have completed thousands of successful material handling projects. Muratec has implemented more than 10,000 AS/RS (automated storage and retrieval systems) worldwide.

Partnership

Many customers have trusted us to implement their projects for decades. We deliver value for the long term and become a reliable partner.

Experience

Cisco-Eagle has over 180 years of combined systems integration experience across its teams. We have executed thousands of projects over five decades.
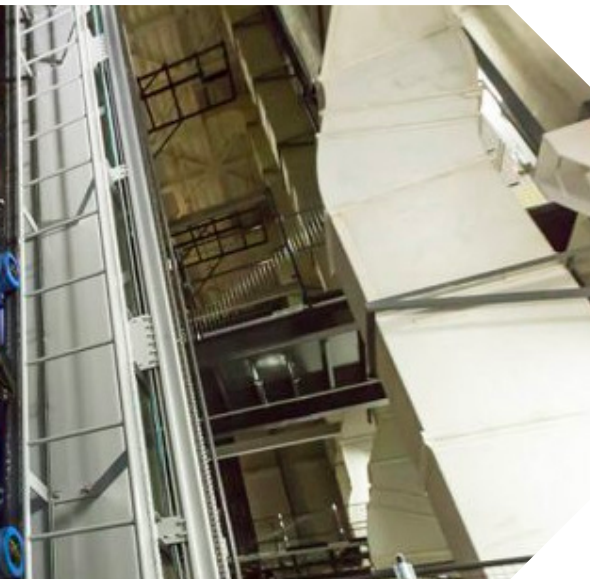

Implementation

Project management is where we excel. The process ties subcontractors, shipments, equipment and various elements into a cohesive, high-performance system.

Innovation

We work in teams. We challenge each other to find ways to make our clients' systems to perform better and create lasting value—today, tomorrow and in a decade.

WE ARE YOUR
TRUSTED PARTNERS

shop talk

"Picture your day free of cluttered aisles, damaged products, searching, climbing, bending and the usual mess. That's AS/RS: less confusion, less busy-work and more productivity. Let Cisco-Eagle and Muratec help you reach the next level."
