

GENIEGRIPS® STIK-IT PADS

GenieGrips® Stik-It Pads are a slim, effective solution to protect your product from damage and minimise the risk of slipping loads.

When transporting products such as steel, plastic containers, frozen or refrigerated pallets, finished product or food and beverages, forklift loads may shift, slide, and become unstable during transport, loading, or storing. This can be particularly dangerous if moving chemicals or other hazardous materials. Finished products can be scratched or damaged by bare metal tines resulting in significant rework time and loss of product.
