Systematic Success

# Hytrol Conveyor Company, Inc.

## Systematic Success

For more than 60 years, Hytrol Conveyor Co., Inc. has been in the business of manufacturing conveyor. From simple solutions to complex integration, Hytrol knows how to build a system from the ground-up. A Hytrol system represents durability, efficiency, and innovation, which provide reliability for years to come.

*"It's quality...Hytrol stands for quality and it is a good, reliable system."*

- Alan Harper, Warehouse Director, Avnet Logistics

*"These EZLogic conveyors, I'm impressed with. They've required no maintenance, no hands on troubleshooting, anything like that. They work very well."*

- David Schatt, Mfg. Technology Supervisor, Kings Hawaiian

*"The ability to coordinate, bringing in 70 trailers of Hytrol Conveyor, and bring it in over a period of time, unload it, and assemble it, while you have an operation fully running - that's pretty impressive."*

- John Heller, Director of Operations, H.D Smith

*"We think the quality of the conveyors, if we look back, at conveyors over the last 20 years, have really improved with Hytrol...The sorters, the high-speed sorters that they have, are very reliable. We've got two and we've had basically no downtime with either one of them since we put them in, so we're very pleased with the performance."*

- Dan Schnitker, Gen. Manager Excel Beef, Dodge City

*"Barnes & Noble had previous experience with Hytrol...and we knew Hytrol produced a quality and reliable conveyor. Hytrol...made good on all their promises. The accuracy, the speed, and the throughput Hytrol affords us has improved our services to our customers. We are very happy with Hytrol."*

- William Duffy, Executive Vice-President of Distribution and Logistics, Barnes & Noble

Barnes & Noble, the world's largest bookseller, installed over 13 miles of Hytrol conveyor in their New Jersey distribution center. With that volume, reliability and durability are a necessity.

*"So what the Hytrol Solution provided for us was a system that was not only repeatable, very dependable, [and] easy to maintain, but it offered us flexibility. And in our business, that is crucial. If we can't be flexible with our customers, we're just not going to be able to compete in the open marketplace."*

*"This Hytrol system has been in place for about 9 years... We had 600 customer/supplier tours last year. So we highlight the Hytrol systems...people say 'It's brand new isn't it?' And if you walked around and you saw it, it's well maintained, but that speaks to the quality of the product, so we are very happy with it – extremely happy."*

- Jim Smith, President, Avnet Logistics

*"I'm very pleased with the Hytrol system. What I noticed from day 1, compared to my other conveyor systems here, it seems a lot heavier duty, it's a lot quieter, and is very easy as far as adjustments to it."*

- Jarod Sproule, DC Manager, Meyer Corp.

*"They have the expertise for planning for the work job. They've got a lot of options that they can come in and look at, build a system around your needs, as well as provide the expertise in the design and the installation as well."*

- Dan Schnitker, Gen. Manager Excel Beef, Dodge City

# Systematic Success

continued

*"Hytrol has been very flexible...some of the original conveyor that we have out there...we originally put in, but a lot of conveyor, they've come in and retrofitted for us."*

*"We needed to upgrade our conveyor system. At the same time, we expanded our building - basically doubled the size of our building. So we needed a company - we're talking about Hytrol - that had equipment that was flexible enough to do multiple things."*

*"We took out 100% of our conveyor, added Hytrol in and asked Hytrol to ship it to the old shipping dock and the new shipping dock, with different containers... the original size totes...and the totes we want to use. But it was flexible enough to handle both size totes."*

- Jim Calabrese, Director of Material Handling Engineering, Avnet Logistics

*"The transition, the timing of the install, the delivery of the product, everything went smoothly without any glitches. Personally, I wouldn't use anybody else."*

- Pat Schmidt, DC Director, Footlocker.com

Hytrol stands on its history and pushes forward into the future, consistently demonstrating systematic success.

**Diverse and Reliable** are the best way to describe Hytrol's sortation product line. With the most diversified line in the industry, Hytrol has a sorter to fit your application.

If you need to sort small individual items, packages or even problematic products such as blister packs and cylindrical bottles, turn to the patented [Vipersort™](#) solution. Or if your need is sorting up to 75lb. products from a flat belt, turn to the [ProSort SC](#).

Hytrol also provides multiple sliding-shoe sorter products in order to best fit your system requirements. The [ProSort 100 Series](#) typically sorts products weighing less than 50 lbs. and can handle over 15,000 products per hour. The [ProSort 400 Series](#) is at home in the high-end distribution centers, sorting over 24,000 products per hour.

For space-saving situations, Hytrol showcases its right-angle, narrow-belt sorters, the [ProSort MRT](#) (4200/hr) and [SRT](#) (6000/hr) with integrated electrical wiring. All Hytrol sorters may be configured for single or dual sided sorting. In order to maximize operational performance request Hytrol's [ProLogix](#) sortation control packages.

All Hytrol sorters are designed for ease of installation, maintenance, and maximum uptime. Also, Hytrol sorters are all factory assembled and tested to ensure the quality expected from Hytrol Conveyor Company.

If you have a sortation need, Hytrol has a solution...period.

# SORTATION CONTROLS

## I<sup>3</sup> - Intelligent, Intuitive, Innovative – the backbone of Hytrol's control packages.

Proper control of a sorter is key to maximizing equipment performance and reliability. The ProLogix® Sortation control package is designed to optimize performance and efficiency of all Hytrol Sortation products. ProLogix® provides total control of not only product tracking but also sorter performance and diagnostics including certain predictive maintenance instructions. Interfacing is accomplished through touch screens with user-friendly menus that are standard with multiple languages selectable with the touch of a button. ProLogix® is designed to be easily integrated into any system and utilizes proven software that is simply configured for your application. Its automatic calibration ability provides for a simpler, quicker, and more accurate setup.

Maximize performance and system up-time and minimize maintenance of any sorter with Hytrol's proven sortation control.

*check this out!*

Hytrol's patented Plug-N-Go wiring system is specifically designed to provide the simplest and most reliable wiring solution for the ProLogix® sortation control. Plug-N-Go provides quick-connect wiring to all devices on the sorter with all the benefits of speed and accuracy of operation. And it's even match-marked for quick and simple installation!

All Hytrol control packages have proven performance records and are fully supported by Hytrol's in-house control specialists.

**Simplicity and Flexibility** drive the concepts behind Hytrol's Gen3 EZLogic®. Hytrol has made it easier than ever to accumulate in a zero-pressure system. EZLogic® is designed for ease of installation, replacement, and configuration.

*This could help!*

Due to the dynamic business environments in which we operate, material handling systems need to be easily adaptable to change. With Gen3, even changes in carton length are no longer a problem. The dynamic zone allocation function automatically adjusts the zone length to accommodate varying lengths of the carton. As your business changes, EZLogic® adapts to keep your system current and efficient. Also, if the need arises, functionality changes are a snap using Hytrol's Genesis™ configuration tool including the ability to clone.

The combination of features offered with EZLogic® can also optimize your system providing higher carton throughput at a given speed. No other accumulation system offers the functionality or the reliability. The IOP feature with enhanced controllers provides single point wiring, therefore reducing installation time and costs.

Your decision is simple, optimize your system today with Gen3 EZLogic® accumulation control from Hytrol.

## Quiet, Efficient, and Dependable describe

Hytrol's revolutionary 24 volt conveyor technology – E24™.

The E24™ motor utilizes gearless technology, which provides quiet and energy efficient operation.

External positioning of the E24™ motor provides improved ease of maintenance of the conveyor. Rather than a centralized drive system, these variable speed motors are distributed along the conveyor making this conveyor both versatile and flexible for your application requirements.

Hytrol has additionally paired the E24™ with the innovative EZLogic® accumulation technology. Not only does this provide zero pressure accumulation but also numerous other functions to the conveyor system. The sleep feature of EZLogic® turns rollers off while not in use, allowing for no energy consumption when product flow is not required. Combining these technologies provides unprecedented flexibility into a highly durable solution.

With few moving parts combined with great heat dissipation, the E24™ motor demonstrates over 6x the life expectancy of conventional 24v technology.

*Wow!*

It's time to provide your system with the most quiet, efficient, and dependable 24 volt technology in the industry – Hytrol's E24™.

*This E24™ technology looks great!*  
*Fits our GREEN initiative...*
