The ProSort 121 is designed to sort products at a 22 degree angle where higher speeds are required and close divert centers are not so critical. The ProSort 131 is designed to sort products at a 30 degree angle where close divert centers are required. Products are transported on anodized aluminum slats where at a predetermined location, divert shoes move diagonally across the conveyor to push the product onto a take-away line. The ProSort 100 family of sorters are designed for high speed applications where product diverting needs to be both positive and gentle.

- 4 Widths Available
