

# Panther Pallet Trucks

## – benefits and features

### Optimum ergonomics

- \* Ergonomically correct handle
- Minimum effort required to move truck from stationary position
- \* Less handle pumps to raise to full height (permanent quick lift pump)
- Ease of movement on 7.75 inch steering wheels

### High efficiency – performance

- \* Adjustable fork height
- Small space requirements
- Good manoeuvrability
- Quick and easy movement into pallets

### Optimum working environment

- \* Movable parts with tight tolerances without metallic contact
- Better utilisation of space (turning angle of 210 degrees)
- Increased manoeuvrability in tight areas (short length behind forks)
- Low own weight meaning less damage to floors
- \* Rounded corners meaning less damage to surroundings

### High flexibility

- Options on fork lengths and widths
- Options on single or tandem load rollers
- Various wheel materials, also anti-static
- \* Explosion proof version available
- \* Stainless plus and semi stainless version available
- \* Company name or logo can be cut into the A-frame
- All RAL colours available
- \* Tailor-made solutions are an option
- \* Fixed/movable steering wheel axle

### Great durability = low costs

- Long operation life
- Low maintenance costs
- \* Strong construction (no through-going axle in the A-frame)
- \* Low price per lift (tests with up to 46,000 lifts)

Features marked with \* are unique for the Interthor products
