

Panther Silent Hand Pallet Trucks

- benefits and features

Optimum ergonomics

- * Ergonomically correct handle
- Minimum effort required to move truck from stationary position
- * Less handle pumps to raise to full height (permanent quick lift pump)
- Ease of movement on 200 mm steering wheels

Great durability = low costs

- Quality in all details (material, tolerances, construction) = minimum wear
- Strong construction
- * Continuous focus on long operation life and low maintenance costs
- * Service manual available on the internet

High efficiency = high performance

- * Adjustable fork height
- * Hoop skates ensure easy fork insertion and withdrawal in/out of pallets
- Small space requirements
- Good manoeuvrability
- * Optimum manoeuvrability on metallic chips, small stones etc

Optimum working environment

- * Silent transport – special rubber wheels (both steering and fork wheels)
- * Silent construction - nylon caps between metal components and tight tolerances
- Better utilisation of space (turning angle of 210 degrees)
- Increased manoeuvrability in tight areas (short length behind forks)
- Low own weight meaning less damage to floors
- * Rounded corners meaning less damage to surroundings

High flexibility

- Options on fork lengths and widths
- * Company name or logo can be cut into the A-frame
- All RAL colours available
- * Fixed/movable (articulating) steering wheel axle

Features marked with * are unique for the Logitrans products
