

APPLICATION NOTE

Labor Savings have been **"SIGNIFICANT"** due to **NEW Mobile Weigh and Label Stations**

Customer: Members-only wholesale cash and carry foodservice supplier with over 80 locations throughout the US. Company offers membership to any business owner or authorized purchaser for a non-profit organization wanting to buy commercial food, equipment and supplies.

Mobility Challenge: Deli workers had to move large pallets of cut meat and cheese to a stationery scale and printer. (These large pallets would also create a bottleneck by blocking the busy aisle). Food items were then repackaged, weighed and labeled with price/date code and distributed accordingly.

Mobility Solution: Newcastle Systems' PP12 Stand-Alone Power Package provided the mobile power component that enabled the customer to create a fully functional Mobile Weigh & Label Station. Station consists of:

- Compact Industrial Cart
- PP12 Stand-Alone Power Package
- Scale
- Datamax-O'Neil I Series Label Printer

Now, the scale and printer are wheeled right to the product. The meat and cheese is weighed and a price tag w/date code is printed "on-demand". The mobile weigh & label stations are typically used for 6 to 8 hours at a time, recharged overnight and ready for use the next morning.

The Mobile Weigh & Label Stations have been implemented in all 80+ locations and ROI has been excellent thus far according to several location managers. **"Driving force to buy was to enable bringing scales and label printers to the product, thereby saving time from walking back and forth."**

PP Series
Stand-Alone Power Package
