

Pick-MAX

Pick-to-Light Hardware Family

Maximum Performance

Pick-MAX pick-to-light, light-directed picking systems increase order fulfillment productivity as much as 200% by eliminating paper pick lists. The modules come in two sizes—standard 5 in. and micro 2.5 in.—to accommodate higher density, smaller pick faces. The same Pick-MAX modules are also used in put-to-light applications, and in Pick-MAX pick-to-light for manufacturing systems.

Special Features

- Open channel, easy mount and reconfigure design.
- Full protection light module enclosures.
- Green construction with recyclable materials.
- 100% compatible with existing Lightning Pick Systems including Pick-MAX™.
- Heavy-duty extruded aluminum duct.

LIGHTNING PICK

Pick-MAX Pick-to-Light Hardware Family

Proven Pick-to-Light Hardware Platform

The modules can display up to five colors and feature a simple graphical user interface that requires minimal training. For both space and cost savings, each module includes up and down arrow indicator lights, permitting one unit to service two pick locations—above and below.

Built-in functionality in each module includes lot tracking and an inventory mode for cycle and physical inventory counts. Every Pick-MAX pick-to-light module features IPTI's snap-in flat track bus design for fast installation, quick reconfiguration of pick locations and easy expansion of the system.

Pick-MAX Watch-Me

Optionally, each module works with the Pick-MAX Watch-Me™ rechargeable, wearable device. When worn on the wrist by a picker, the pick-to-light module records the serial number associated with each Watch-Me unit, identifying the wearer for full accountability as picks are completed. Because Watch-Me confirms picks automatically and enables multiple pickers to work in the same area, picking productivity increases by 20-50%.

Pick-MAX Products

- Mobile picking carts
- A-frames
- Automated sorters
- Carousel light towers
- Quickest training curve and start-up time
- Pick-to-Light
- Pick-to-Light for Manufacturing
- Put-to-Light
- Voice-directed Picking
