

PORTAFAB WINDOWS

Windows are an integral part of any modular office design and PortaFab modular building systems accommodate a wide variety of styles, sizes, and glazing options to satisfy the particular needs of any space.

The proper window system can help create a more open and engaging atmosphere, make spaces more environmentally friendly, and add to aesthetics of the workspace. Of course, specifying the proper window system must also consider special needs like how easy the surface and surrounding area are to clean and whether it will function in a very harsh environment. Cost considerations also play an important role.

PortaFab not only offers an extensive array of solutions in regards to styles, sizes and glazing options, but also offer and design assistance to help determine the best window system for your application.

STYLES

STANDARD WINDOWS

This economical window style includes fixed windows that measure either 4' wide by 3' high and 2' wide by 3' high as well as sliding windows that measure 3' x 3'. The center glass is mounted in the middle of the window frame to provide exceptional support and durability for industrial environments. All Standard Windows feature 1/4" clear tempered safety glass, but can be easily modified to accommodate others sizes or glazing options.

BEVELED WINDOWS

Designed specifically for cleanroom applications, the absence of a ledge on this window style makes it easier to clean while the design eliminates corners that often collect dust, particles, and other micro organisms. It is a cost effective alternative to Double Flush Window systems that require two separate pieces of glass yet still helps the space in achieving FDA compliance.

FLUSH WINDOWS

Our original cleanroom window system provides a completely flush surface without ledges or joints. They can be hermetically sealed and coated with a desiccant finish to minimize any air flow disruption and can also be integrated into return air walls. In addition to enhancing the aesthetics of the space, Flush Windows are ideal for applications requiring extensive environmental control.

DOUBLE FLUSH WINDOWS

Similar in design to the Flush Window, but developed for interior wall applications requiring flush surfaces on both side. The Double Flush Window system provides an attractive appearance and two completely flush surfaces without ledges or joints.

SIZES

Portafab stocks three standard windows, but many different options are available.

STANDARD WINDOWS

Our standard fixed windows measure 4' x 3' and 2' x 3'.

SLIDING WINDOWS

3' x 3' sliding windows can also be incorporated into modular walls.

CUSTOM WINDOWS

Windows of all sizes can be incorporated into most offices.

FULL LENGTH WINDOWS

Full length windows are becoming more popular for their ability to create an open environment.

GLAZING OPTIONS

Additional materials can be substituted in place of the 1/4" clear tempered safety glass such as:

- Laminated glass for added sound control
- Insulated glass for better thermal insulation
- Break resistant polycarbonate windows

Specialty glazing options can be added such as auto-darkening glass, desiccant finish and windows can be hermetically sealed.
