

Rigid Lifelines® Rolling A-Frame Anchor Track™ System

This guide can be used to prepare a bid specification for the incorporation of a Rolling A-Frame Anchor Track System into a competitive bid project or application.

***Each product specification is organized in three standard sections:**

SECTION 1 - GENERAL:

Includes product scope, references, performance requirements, applicable documents, quality assurances, product warranty information, and project conditions and handling practices.

SECTION 2 - PRODUCTS:

Includes a description of materials, products, and accessories to be incorporated into the project.

SECTION 3 - EXECUTION:

Includes provisions for product preparation, installation, field quality control, demonstrating and training, and protection.

***The specifier may need to edit this product specification to reflect the options and applications for a specific project. Notes to assist the specifier in editing this product specification are indicated in brackets. All notes and brackets should be deleted on the final draft.**

SECTION 1 - GENERAL

1.1 SCOPE

- A. Product:** The Rolling A-Frame system provides rigid fall protection and consists of four casters with swivel locks and brakes, two A-frames connected by an I-beam weldment, and rigid track that attaches to the I-beam weldment. The system is highly mobile with the A-frame design, four-position swivel lock casters, and moldon polyurethane casters (indoor use) or foam-filled pneumatic casters (outdoor use). System can be manually operated or motorized; track is mounted on bottom of the I-beam weldment with single, dual, or multiple tracks for one, two, or multiple workers.
- B. General Design Standards:** System is designed in conformance with the following applicable standards:
 - a. ANSI Z359, OSHA 1910.66, and AISC Manual of Steel Construction.
- C. Standard Equipment Specifications:**
 1. Standard Track Length: [Track length is determined by the amount of actual working area needed, the fall hazard, and by the length of the track from one end stop to the other.]
 2. Coverage Area: [Linear coverage up to and including the end stops of the monorail and up to 10-degrees off center perpendicular to the monorail.]
 3. Working Capacity: [All standard systems are designed for use with lanyards that limit the maximum average arresting force to 900 pounds. Worker capacity also depends on

the number of people using the system at once. For more than two worker access, please contact a Rigid Lifelines technical sales specialist.]

4. Overall Height: [The overall height is measured at the highest point on the system after installation.]
5. Trolley-Hook Height: [The trolley-hook height is measured by the distance from the ground to the underside of the trolley hook.]
6. Worker Pass-Ability: [Worker pass-ability depends on whether two workers need to pass one another while tied-off to the system. Worker pass-ability also requires a dual track system.]
7. Inside Clear Width: [The inside clear width is the distance from one inside support leg to the other.]
8. Construction: [Fabricated using high-strength steel or ASTM A36 steel for structural components and A500B for columns and steel tubing.]

1.2 REFERENCES

1.3 PERFORMANCE REQUIREMENTS

- A. **Coverage:** System shall provide linear coverage of size indicated on drawings and consist of:
 1. Enclosed track bolted on I-beam weldment.
 2. Right and left support legs.
 3. Upper and lower brace tubes.
 4. Lower connection plate.
 5. Wheel lock assembly.
 6. Track hanger weldment.
 7. Swiveling connector Anchor Trolley™.
- B. **Modular, Pre-Engineered Design:** System shall be designed for one, two, or multiple workers using single, dual, or multiple tracks.
 1. System shall be designed, fabricated, and installed in accordance with ANSI Z359, OSHA 1910.66, and AISC Manual of Steel Construction.
- C. **Design Strength:** For one user, the system shall be designed based on a worst-case placement of the 900-pound (408 kg) maximum average arresting force with a safety factor of two and the weight of the anchor system.
- D. **Operating Temperature:** 5 to 200 degrees F (-15 to 93 C)
- E. **Structural Design:** The systems' structural design is based on dynamic load capacity.

System shall be designed to withstand:

 1. System and dynamic load and impact factors.
 2. Dynamic load capacity equal to rated capacity.

3. Inertia forces from system and dynamic load movement.

1.4 DOCUMENTS

A. **Submittal Procedures**

1. Product data is included for the system and all accessories. Product data provides capacities, performance, standard use, and applied forces to system.
2. Shop drawings, which outline system configuration, dimensions, construction, and assembly details.
3. Manufacturer's Warranty
4. Manufacturer's *Assembly and Operation Instruction Manual* with included Assembly Drawings

1.5 QUALITY ASSURANCE

- A. Standard system shall be designed, fabricated, and installed in accordance with ANSI Z359, OSHA 1910.66, and AISC. Rigid Lifelines® assures the safety and quality of all systems when installed and maintained according to their *Assembly and Operation Instruction Manual*.
 1. Applications where system will be used in potentially hazardous environments or explosive environments require special consideration. These special conditions must be disclosed prior to placing an order.
 2. Application where system will be used in essential facilities, such as fire departments, military buildings, or communications buildings, will require special consideration.
 3. Custom systems (systems modified over and above the standard dimensions or capacities shown within our Rigid Lifelines literature) will require special consideration.
- B. If different specifications are required, alternate specifications need to be requested before the order is placed. System modifications may be required at additional cost to conform to specifications other than ANSI and OSHA.
- C. **Manufacturer's Qualifications:** An ISO 9001 registered company with more than 20 years of experience successfully designing and manufacturing fall protection solutions.
- D. **Installer's Qualifications:** A company that is acceptable to the manufacturer and meets OSHA requirements for a Qualified Person assembling and installing fall protection systems for multiple applications. Installer should be able to:
 1. Bolt connections in accordance with torque tightening procedures specified in AISC Manual, Part 5.
 2. Clearly label system with maximum average arresting force visible from tie-off position.

1.6 WARRANTY

- A. **Manufacturer's Warranty:** Included on manufacturer's standard form and outlines the manufacturer's agreement to repair or replace assemblies and components that fail in materials and/or execution within warranty period from date of substantial completion.
 1. Warranty covers the engineered track equipment, wearable end truck wheels, and Anchor Trolley™ wheels and teeth to be free from defects in material and workmanship for a period of ten (10) years commencing on the date of shipment from the Rigid Lifelines facility.

1.7 CONDITIONS/DELIVERY, STORAGE, AND HANDLING

A. Project Conditions

1. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results.
2. Do not install products under environmental conditions outside manufacturer's absolute limits.

B. Delivery, Storage, and Handling

1. Store products in manufacturer's packaging until ready for installation.
2. Store and dispose of solvent-based materials in accordance with requirements of local authorities.

SECTION 2 – PRODUCT

2.1 ACCEPTABLE MANUFACTURERS

A. Rigid Lifelines®

Locations: Morgantown, PA and Las Vegas, NV; **Phone:** 800-869-2080;

Website: RigidLifelines.com

2.2 ROLLING A-FRAME ANCHOR TRACK™ SYSTEM

*System is available for one, two, or multiple workers.

A. Models: The following is the Rolling A-Frame system manufactured by Rigid Lifelines.

1. **Fixed-Height system** as manufactured by Rigid Lifelines.
 - a. Highly mobile A-frame design consists of track bolted to a header weldment that is supported by braces and legs equipped with casters. Depending on design specification and dimensions, typical overall weights are between 1,175 and 4,225 pounds. Standard trolley-hook height distance is between 20 and 30 feet. Standard inside clear width distance is between 17 and 35 feet. Field assembly comes with bolt-together components (no welding required).
 - b. Construction: Fabricated using high strength steel or ASTM A36 steel for structural components and class A500B for columns and steel tubing.
2. **Adjustable-Height system** as manufactured by Rigid Lifelines.
 - a. Highly mobile A-frame design consists of track bolted to a header weldment that is supported by braces and legs equipped with casters. Depending on design specification and dimensions, typical overall weights are between 1,510 and 3,900 pounds. Standard trolley-hook height distance is between 16-feet 8-inches and 20-feet 1-inch. Standard inside clear width distance is between 10 and 35-feet 2-inches. Field assembly comes with bolt-together components (no welding required).
 - b. Construction: Fabricated using high strength steel or ASTM A36 steel for structural components and class A500B for columns and steel tubing.

B. Design Factors: Track, tubing, and welded track have minimum yield strength of 46,000 pounds per square inch. Steel I-beams and plate have minimum yield strength of 36,000 pounds per square inch. Track profile design ensures wheel protection, accurate alignment with minimum friction, and low-maintenance, self-cleaning profile. All track shall have full contact flange loading surfaces (flat) to decrease flange and wheel loads during a fall event.

- C. Structure:** Enclosed Anchor Track(s) bolted to steel I-beam weldment by hanger assemblies supported by support legs with moldon polyurethane casters.
1. Support legs: Tube weldments with full bottom base plate and top plate.
 2. I-Beam Weldment: Fabricated from singlewide flange beam. Includes clamp plates for attaching I-beam to column.
 3. Hanger assemblies: Includes hanger assemblies that provide a rigid connection for suspending track. Assembly to consist of hanger bracket and hardware. Use of threaded rods in flush hanger assemblies is not permitted.
 4. Runways: Vertical truss fabricated from square steel tubes and enclosed steel track.
 - a. Track: Enclosed cold-formed steel track serves as bottom cord of trussed track and permits trolley(s) to ride on lower inside flanges. Fabricated lower running flanges with flat surface are for higher durability and wheel contact. Sloped flanges are not permitted.
 - b. Track splice: Includes truss splice plates and channel-shaped track splice joints for joining track sections. Splice joints must be located within four feet of a support point.
 - c. Standard track cantilevers: Up to 18 inches of cantilever is allowed from a hanger location to the end of the trussed track. Up to 12 inches of cantilever is allowed from a hanger location to the end of the plain track. Longer track cantilevers are done on a customized basis.
 5. Swiveling connector Anchor Trolley™: Rigid-body trolley designed to ride inside enclosed track and to carry load.
 - a. Construction: Steel body with two wheels on each side and positioning attachment point at center of trolley so load weight is evenly distributed to trolley wheels.
 - b. Braking system: If at least 80 pounds of force, including the weight of the self-retracting lanyard, are exerted on the swiveling connector, a series of eight hardened-alloy steel contact points create friction against the enclosed track. The friction generated by the contact points, in conjunction with the weight of the worker, causes the trolley to stop all movement on the track.
 - c. Wheels: Removable, self-centering wheels with sealed lifetime lubricated bearings. Vertical wheels shall be flat to match track profile. Non-removable or tapered wheels are not acceptable. Polyamide wheel material provided by Rigid Lifelines®. Steel wheels are optional.
 - d. Designed for attachment of carabiner.
 6. End stops: Molded composite resilient bumper installed in track to prevent end trucks from rolling out of track. Bolt stops without energy absorbing bumper are not acceptable.

2.3 **SYSTEM OPTIONS**

***The following options are available for the Rolling A-Frame Anchor Track™ System.** [Select required options from the following, or contact Rigid Lifelines if other types of accessories are required.]

A. Model Types

1. Fixed-Height system
2. Adjustable-Height system

B. Application Options

1. Single, dual, or multiple tracks for use by one, two, or multiple workers
2. For outdoor applications
 - a. Foam-filled pneumatic or dual-pneumatic casters with swivel locks and caster brakes
 - b. Yellow ArmorPoxy finish

3. Large diameter casters to ease positioning
4. Nylacron casters
5. Mylar™ lip seal: For heavy dust or paint overspray applications
6. Anchor Track™ options
 - a. Plain or trussed track (single, dual, triple, or quad trussed track)
 - b. Steel Track: Rolled from ASTM A572, A607, or A715 grade steel; available with enamel, powder, epoxy, or galvanized coatings

2.4 **SYSTEM COMPONENTS**

A. I-Beam Weldment

1. Fixed Steel I-beam
2. Offers greatest under I-beam height, starting at 20 feet under the beam.

B. Support Legs

1. Fabricated from heavy gauge square mechanical tubing.

C. Casters

1. All Rolling A-Frame Anchor Track™ Systems are provided with four-position swivel locking mechanisms.
2. Standard casters are Polyurethane casters.

D. Track

1. Low profile keeps space requirements to a minimum.
2. Combination of high strength to low weight ratio reduces stress on structures.

E. Track Hanger Assemblies

1. All Rolling A-Frame Anchor Track Systems are provided with a flush type hanger assembly for attachment to a steel I-beam weldment.
2. Hanger assemblies are of appropriate size and numbers for selected system.

F. End Stops

1. End stops are equipped with resilient rubber bumpers to increase impact resistance and are through bolted to the enclosed track.
2. End stops are standard on all systems.

G. Swiveling Connector Anchor Trolley™

1. The Anchor Trolley is built with non-consumable parts and a fault indicator that appears if an internal spring breaks.
2. When at least 80 pounds of force, including the weight of the self-retracting lanyard, are exerted on the swiveling connector, the brakes engage.
3. The brakes are composed of a series of 8 hardened-alloy steel contact points that create friction against the enclosed track. The friction generated by the contact points, in conjunction with the weight of the worker, causes the trolley to stop on the track.

2.5 **SHOP FINISHING**

A. Standard Paint Colors:

1. All systems are painted with one coat of Rigid Lifelines® Yellow Industrial Enamel.

B. Surface Preparation and Painting Procedures:

1. Rigid Lifelines adheres to the standards of the Society for Protective Coatings (SSPC) for all product surface preparation.
2. Rigid Lifelines Anchor Track™ System components are deburred and descaled using power tools equipped with sanding discs and wire wheels prior to painting.

3. Components are washed with high-pressure/high temperature biodegradable degreaser solution.
4. All components are coated with quick drying semi-gloss enamel, applied to a minimum dry-film thickness of two to three mils.
5. A finishing coat is applied with a hot airless electrostatic spray paint system.
6. Painted components are cured at air temperature.

SECTION 3 – EXECUTION

3.1 PREPARATION

- A. DO NOT** start installation until support structures are properly prepared.
- B. Inventory:**
 1. Check materials to ensure all parts are present.

3.2 ASSEMBLY

- A.** Units and accessories should be installed in accordance with manufacturer's *Assembly and Operation Instruction Manual*.
- B.** Do not modify system components without manufacturer's approval.
- C. Installation Manual/Assembly Drawings**
 1. Refer to installation manual to find dimensions for a specific model.
 2. Consult included assembly drawings for list of building materials.
- D. I-Beam Weldment Installation**
 1. Balance I-beam weldment on two blocks so that the labels are readable.
 2. Place a lifting strap under the I-beam evenly distributing the I-beam weldment's weight.
 3. Attach the other end of the lifting strap to a crane or forklift and hoist the I-beam weldment high enough to allow both leg assemblies to fit under the I-beam weldment.
 4. Position the assembled legs so that the upper brace tube is on the outside of the leg assembly.
 5. Position a worker using a man lift to the same height as the I-beam weldment.
 6. Use a second crane or forklift to lift the top portion of one leg assembly underneath the I-beam weldment.
 7. Attach the plates together using bolts, lock washers, and hex nuts. Securely tighten nuts.
 8. Repeat steps "1" through "7" with the other end of the I-beam weldment and remaining leg assembly. Securely tighten nuts.
- E. Swiveling Connector Anchor Trolley™ Installation**
 1. Install swiveling connector Anchor Trolley on track. Secure end stop bolts and rubber bumpers.
 2. After installation is complete, enclosed tracks should be leveled. Check tightness for all bolts and nuts.
- F. Track Hanger Weldment Installation**
 1. Confirm that Anchor Trolley has been installed in the track.
 2. Attach the Anchor Track™ to the I-beam weldment using track hangers, bolts, lock washers, and hex nuts. Securely tighten the nuts until all are installed.
- G. Caster Installation**
 1. Lay right and left leg assemblies on the ground.

2. Position the casters under the legs' base plates. Insert the base plates' threaded studs into the holes in the casters' top plates. Place a lock washer and hex nut onto each stud. Securely tighten all nuts.
3. Install wheel locks
 - a. For polyurethane casters (indoor use): line up guide pin with wheel lock slot. Install wheel lock shoe. Install caster, foot pedal, and axle and tighten nut. Repeat these steps for all remaining casters.
 - b. For pneumatic or dual-pneumatic casters (outdoor use): Casters ship with their wheel locks already installed.

H. Final Assembly

1. Torque locknuts, bolts, and flat washers to appropriate specifications.
2. **This system must be used with an ANSI-rated self-retracting lanyard (SRL).** Connect SRL and retrieval tagline in accordance with manufacturer's specifications.

3.3 FIELD QUALITY CONTROL

*Perform field quality control inspection before each use, after a fall event, and annually. These checklists are included in the *Assembly and Operation Instruction Manual*. A Competent or Qualified Person must conduct the annual inspection. Consult the *Rolling A-Frame Anchor Track™ System Assembly and Operation Instruction Manual* for more information.

A. Inspection

1. *After a Fall Event and Annual Anchor Track™ System Inspection*
 - a. Check that the beam clamps are installed horizontal within + / - five degrees.
 - b. Check that end stop bolts are present and have locknuts installed.
 - c. Using a torque wrench, check that all bolts are present and torqued to values shown on Assembly Drawing.
 - d. Check that splices, if supplied, are centered on track joints.
 - e. Verify that capacity labels are present, attached, and legible. See Label Placement Drawing. Verify that the number of trolleys matches the value on the capacity label.
 - f. Verify that the fall arrest system is not being used for material handling.
 - g. Check the track for levelness within + / - 1/4 inches per 20 feet of track.
 - h. Check the track flanges. Track flanges cannot be bent downward more than five degrees. Check the track thickness. Track thickness cannot be worn more than 10 percent.
 - i. Check all system welds for cracks.
 - j. Check system components for corrosion and bent or damaged areas.
 - k. Check that all wheel studs, if supplied, are torqued to value shown on Assembly Drawing. Note that these 1/2-inch wheel studs have a different torque value than the system's other 1/2-inch bolts.
 - l. Verify trolley can traverse entire length of track without snags.
 - m. Check trolley for visibly bent swiveling connector, broken welds, or excessive wear or corrosion.
 - n. Test the operation of the trolley's swiveling connector and verify that it can rotate freely. Test the operation of the trolley and verify the wheels rotate freely.
 - o. Check system components for loose components.
 - p. Check system components for loose or missing fasteners.
 - q. Check system support structure for stability.
 - r. Verify that hanger assemblies are installed properly and fasteners are torqued to proper values.

- s. Check that the support arms pivot bolts, if supplied, are properly installed and tightened. Check system for unauthorized modifications. Only Rigid Lifelines can authorize modifications. Remove system from service if it is modified in any way.
2. *Before Each Use Inspection Checklist*
 - a. Test the swiveling connector(s) on each trolley to verify that each trolley rotates and swivels freely.
 - b. Verify that the trolley(s) can easily and smoothly roll the full length of the track(s).
 - c. Check all system welds for cracks.
 - d. Check system components for corrosion.
 - e. Check system components for bent or damaged areas.
 - f. Check support structure for stability.
 - g. Visually check all bolted assemblies for proper connections and properly secured bolts and nuts.
 - h. Caster Inspection
 - 1) Inspect casters for visible signs of damage or excessive wear.
 - 2) Check each caster unit for potentially concealed damage.
 - 3) Visually check that all wheel studs are present and tight.
 - 4) Ensure that the caster wheel axles are properly secured.
 - 5) Ensure that the caster wheel locks and swivel locks perform properly.

B. Acceptance Inspection

1. After the system has been installed and after any modifications, an acceptance inspection must be performed using the *After a Fall Event and Annual Anchor Track System Inspection Checklist* included in the *Assembly and Operation Instruction Manual* before use. An authorized dealer or installer should perform acceptance inspections.

C. Maintenance

1. To keep systems in good operating order, engineers recommend establishing a regular schedule of inspection and lubrication. All parts should be inspected, all loose parts adjusted, and worn parts replaced at once.
2. A Competent Person must perform an annual system inspection using the *After a Fall Event and Annual Anchor Track System Inspection Checklist* included in the *Assembly and Operation Instruction Manual*.
3. Grease the casters' swiveling section and axles to ensure proper lubrication.
4. Ensure that the wheel locks are making contact with wheel material.

D. Clean Surfaces

1. Touch up scratches and blemishes with matching paint from manufacturer.
2. Keep surfaces clean and clear of build-up and residue.

E. Protect System

1. Protect assembled products until completion of project.
2. Touch-up, repair, or replace damaged products before substantial completion.

F. Quality Standards

1. Rigid Lifelines® is an ISO 9001-2008 Registered Corporation.
2. Welding performed during manufacturing process meets the American Welding Society's (AWS) D1.1 Standards.
3. Rigid Lifelines Anchor Track™ Systems are manufactured to standards ensuring safety, reliability, and the highest quality.
4. Rigid Lifelines' products are manufactured in the United States of America at facilities located in Morgantown, Pennsylvania, and Las Vegas, Nevada.
5. Rigid Lifelines certifies that all system components are in full compliance with the Buy American Clause of the American Recovery and Reinvestment Act (ARRA) of May 2009.
