

270° Mirrored Corner Domes

Se-Kure Domes and Mirrors is the only manufacturer or fabricator that provides this mirrored dome. This dome is for mounting on an outside corner of a 4-way intersection, providing a view of all directions. The mounting system has a set of springs that draw the dome into place.

The 270 Degree dome serves the same purpose as the full dome except it is not centrally located in an intersection. Usually when a 270 Degree dome is used, it is in an area with narrow aisles or in a lobby of a building.

The view distance ratio is about 1 foot of viewing distance to each inch of the diameter of the dome. Due to the nature of these domes, they are made in only an 18" and 26" model.
