# Column Sentry® FE

The new Column Sentry® product is specifically designed for applications where the installation of a standard Column Sentry would cover critical items, such as fire extinguishers. The product is a standard Column Sentry® with an 8" deep by 10" wide cutout at the top.

The cutout gives the added benefit of protection to whatever item is mounted on the column.

This product can be combined with another Column Sentry of any size to create a custom-fit solution where fire extinguishers, electrical boxes, etc. are mounted on only one side of the column. In this setup, use one half of the Column Sentry FE and one half of the other size to create your custom product. The Column Sentry FE is only sold in full units.

The Column Sentry® FE is installed in the same manner as the rest of the Column Sentry product line. The standard hook and loop fastener holds both sides together. The cutout does not affect the location or function of these straps.

The Column Sentry FE product is available in the 12"x12" or the 8"x8" sizes, for the same price as standard Column Sentry® products.

**Contact your Column Sentry® representative, or call Sentry Protection Products for more information or to purchase the Column Sentry® FE**
