

# VibraTag

## VibraTag

VibraTag is an active tag worn by personnel and detected by the ZoneSafe proximity warning system. The driver of a vehicle fitted with ZoneSafe is given an audible and visual alert when a person wearing a VibraTag enters the detection zone.

VibraTags give 2-way feedback; when a vehicle comes in to range, the wearer is instantly warned by short bursts of vibration. VibraTag can be detected and triggered up to 9 metres away from an approaching vehicle.

VibraTag is hermetically sealed to provide the best long-term protection. The high capacity battery enables VibraTag to be triggered hundreds of times before the battery gets low. The tag is fully charged within 2 hours using a wireless Qi compatible charger\*\*.

VibraTag can be hung from a lanyard, placed in a pocket or worn in a ZoneSafe armband\*\*. A belt clip kit\*\* fixes to the back of the VibraTag and allows it to be worn on a belt or the back of a hard hat.

\*Exact battery life will depend upon usage; estimates are based on 90 seconds of activation per day.

\*\*Sold separately

### Features Benefits

**Robust** VibraTag is hermetically sealed to provide the best long term protection of the hardware. Reinforced polymer casing provides extensive durability.

**Integrate with PPE** VibraTag can be worn on a lanyard. It also easily fits into pockets, armbands or can be clipped to hard hats and belts (using belt clip kit).

**Long Life** Minimum 6 months before needing to be recharged (based on tag continuously activated for 90 seconds per day). 2 hour recharge time.

**Easy To Use** VibraTag will activate if the wearer enters a ZoneSafe system's detection zone.

### General Specifications

**Dimensions** 84 x 53 X 12mm

**Materials** Reinforced polymer

**Weight** 65g With Clip Kit

**Protection** IP67

**Temperature** -10°C to 55°C

### Accessories

**EURIDM6738** Belt Clip Kit

**EURIDM6850** Qi Charge Pad
